Ellen Kramp | Full-Stack Software Engineer

Summary

As an adaptable and communicative software engineer, I have a penchant for the type of creative and analytical thinking that powers a team toward success. With nearly seven years as a software developer at a variety of companies - from startups to consultancies - I'm comfortable working closely with a multitude of people, including Product, Design, and other engineers. I'm passionate about creating seamless UI/UX experiences that lead to acquiring and retaining users. Not to mention, creating succinct and well-documented APIs.

Experience

Universe Exploration Co.
July 2020 - October 2024
Full Stack Software Engineer
- Create new UI/UX features using React/Javascript, Typescript and Scss
- Create and implement a robust analytics service, utilizing multiple CDNs from Facebook, Google, Amplitude, Braze, and Appsflyer
- Investigate and implement new tools for efficiency, performance, and improved developer experience such as Next.js
- Integrate merchant and commerce functionality using Stripe, including merchant sign-up flow and user-product sales flow
- Implement suite of interactive product upsell components, including metered feature usage and editor-embedded upgrades
- Triage bugs and update deployments to ensure that critical issues are addressed
- Write and test backend code for a microservices architecture using Node.js and Jest
- Create APIs for customer shipping using 3rd party integration with ShipEngine
- Create and update commerce APIs using integration with Stripe
- Maintain code base documentation changes using Swagger and .dbml

Stable Kernel
October 2019 - June 2020
Front End Software Engineer
- Created web app metrics dashboard for portable oxygen concentrator healthcare device using Angular 6/7
- Created white-label web application solution from the ground up for a health insurance conglomerate
- Implemented UI support in vanilla JS and html for outdated browsers/browser versions

General Electric
October 2018 - October 2019
Front End Software Engineer
- Built internal web application from ground up, including messaging and account hubs
- Interfaced with GraphQL to retrieve specific data subsets
- Collaborated with engineering team to compose internal component library

Groundfloor
June 2018 - October 2018
Front End Developer Intern
- Designed and prototyped mobile app using React Native code

Ellen Kramp | Full-Stack Software Engineer
